Onward Behavioral Health Offering Telehealth Services for All Outpatient Levels of Care

The Coronavirus pandemic has already had a great impact on our communities and is presenting us all with barriers we have not previously faced. All individuals, including those who suffer from mental health, substance use, or eating disorders are challenged with keeping the risk of contracting the virus low by observing social distancing recommendations. However, the risk endured by leaving behavioral health issues untreated presents significant danger as well.

As a provider of behavioral healthcare services, Pyramid Healthcare, Inc. and all of its affiliated companies and staff are committed to finding ways to continue delivering quality care during this uncertain time. **Therefore, we have implemented the ability to offer the same services in all of our outpatient locations during the current crisis using telehealth videoconferencing technology.**

This will help us ensure that patients have access to group, individual, family, and medication management sessions in the event that they cannot visit our Rehab After Work, The Light Program and Seeds of Hope locations in Pennsylvania in person. These services will be available for partial hospitalization/partial care (PHP/PCP), intensive outpatient (IOP), and outpatient (OP) levels of care.

The flexibility of our payers, referral sources and regulators during this crisis is relied upon and greatly appreciated.

For any questions or to schedule an initial assessment, please call us at **(610) 644-6464** or visit us at obhcares.com.
